

SPECIFICATIONS

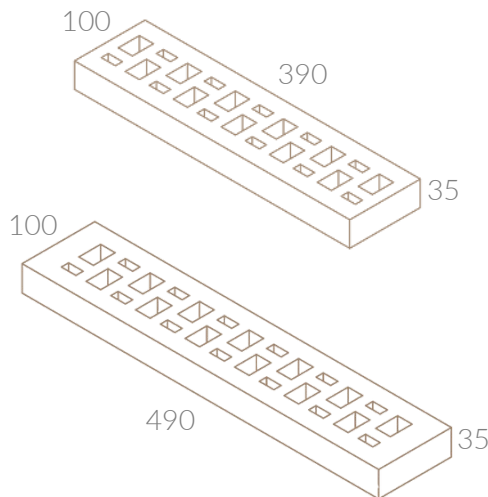

PRODUCT ID FBX390 | FBX490

DESCRIPTION FBX Linear

COMPRESSIVE STRENGTH >20MPa

FINISH Smooth

COLOURS Chai Espresso Latte

Size variation +/- 1.5%

FBX390 **2.1kg**

390 X 100 X 35

Length x Height x Thickness

56/m²

10mm mortar joint

FBX490 **2.6kg**

490 X 100 X 35

Length x Height x Thickness

45/m²

10mm mortar joint

LINEAR FACEBRICKS

Linear bricks, also known as long format or Roman bricks, have become increasingly popular in contemporary architecture, particularly in facade designs.

Their appeal lies in their ability to emphasize horizontal lines and add a sleek, uniform aesthetic to buildings. Originating in Roman times, these bricks have evolved to stay relevant in modern construction, offering a balance between traditional masonry and contemporary design elements.

The elongated shape of linear bricks creates a visually striking effect, enhancing the linearity of a facade and contributing to a more refined, detailed appearance. This combination of historic charm and modern functionality makes linear bricks a versatile choice for architects looking to create facades that are both timeless and innovative.
